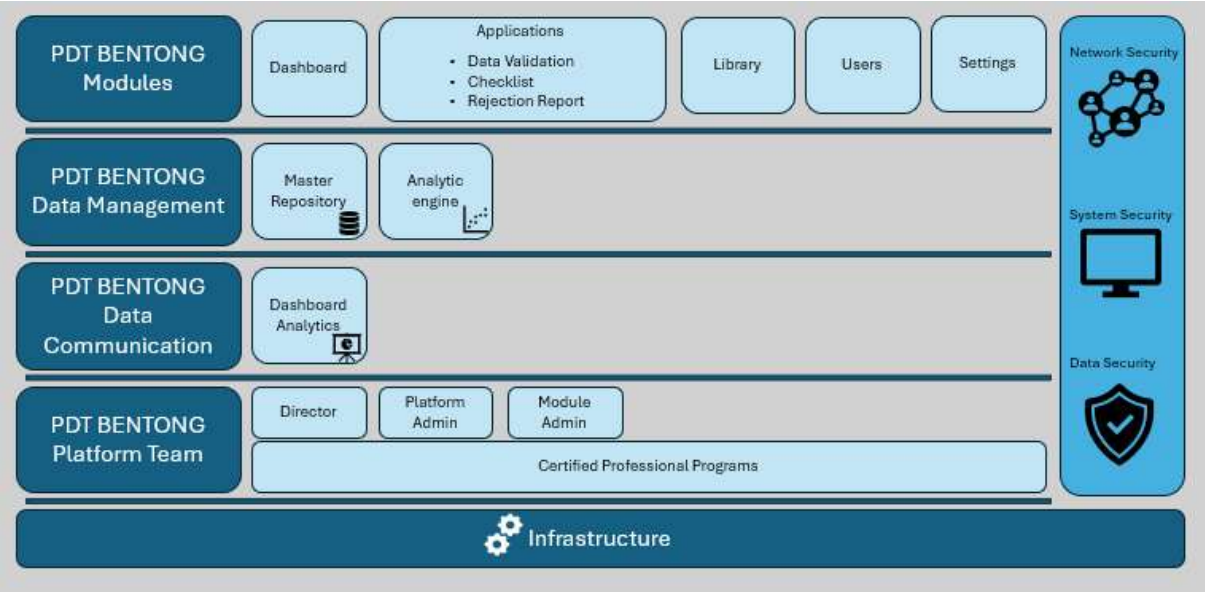
1. Introduction of PDT Bentong

- It is a web-based application that is being operated in a Platform as a Service (PaaS) model.
- Its core objective is to modernize and streamline the land application process by replacing manual, paper-based workflows using Intelligent Document Processing (IDP), improving processing speed, accuracy, traceability, and staff efficiency.



2. Modules of PDT Bentong

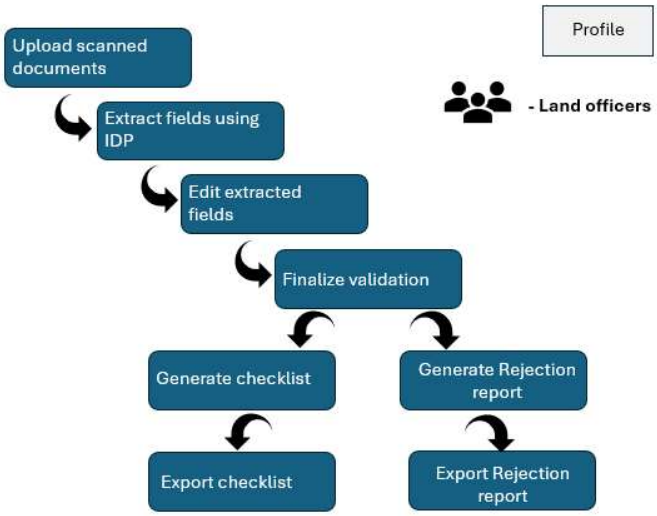
- PDT Bentong will consist of the following seven modules:

No.	Modules	Functions
1	Dashboard	• Visual representation of the applications. • Displays key metrics to represent trends, comparisons, and categorical breakdowns. • Provides live data feeds or periodic refreshes to show the latest system status.
2	Applications	• Displays applications in tabular format. • Allows keyword-based searching and filtering. • Navigation for viewing multiple records. • CSV export for offline records. • Adding applications via local files.

		• IDP-driven extraction of key details.
2a	Data Validation	• Manual correction of IDP-extracted data. • Color-coded confidence ratings. • Lookup for specific data entries. • Locking validated fields.
2b	Checklist	• Ensures all required fields and documents are completed for a land application. • Available only for applications in “Validated” status. • Read-only checklist ensures integrity. • PDF export for official processing.
2c	Rejection Report	• Each application must provide access to a Rejection Report. • Available only for applications in “Validated” status. • Can edit the names of the officer and approver. • PDF export for official processing.
3	Library	• Stores all historical applications for reference. • View past applications with entity headers. • Supports keyword searches to retrieve specific cases • Allows exporting an individual application’s data in **PDF format**. • Organized in two columns: *Field* | *Value*.
4	Users	• Enables system administrators to manage users efficiently. • Displays essential details: **Email Address, Phone Number, First Name, Last Name**. • Includes pagination for large datasets • Supports **search by name or email**. • Add a new user with their first name, last name, email, phone number and a password
5	Settings	• Read-only display of user details: **First Name, Last Name, Email Address, Phone Number**

3. End-to-End Workflow of Training Management Activity

The following workflow illustrates the various functions as they support the operationalization of activities within the PDT application.



4. PDT Bentong Application & Access

- The PDT Bentong Application can be accessed via the URL https://idpbentong.com/Account/Login, and its login page is as shown below.

5. PDT Bentong's Functions & Features

- All users in the **PDT Bentong** application have access to the same functions and features, allowing them to efficiently manage land applications and related processes.

5.1 Dashboard

Tasks	Module Objective	Functionality
Monitor application ageing and trends, analyse workload efficiency data, show real-time updates	Provide a visual overview of application trends, workload insights, and processing efficiency.	Uses bar charts, pie charts, and tables to represent trends. Automatically updates with new applications

5.2 Application

Tasks	Module Objective	Functionality
View Application List	Provide users with a structured view of all applications, enabling quick access to essential details	Displays a structured table with key details. Supports pagination and loads data efficiently.
Search & Filter Applications	Allow users to refine application searches using keywords and filters to improve efficiency in locating relevant records.	Enables keyword search and advanced filtering by criteria. Clears filters using the reset option.
Upload New Applications	Enable officers to submit new applications seamlessly, ensuring that all documents undergo IDP-based automated data extraction.	Allows document submission via cloud folder or local upload. Sends files to the IDP system for automated data extraction.
Export Application Records	Provide a mechanism for users to download application data in CSV format, supporting offline analysis and documentation.	Supports CSV export of visible applications. Reflects active filters in exported files. Uses standardized filenames for easy identification.

Track Application Status	Maintain real-time updates on application progress, allowing users to monitor statuses such as "New," "Validated."	Displays real-time updates on the current status of each application. Updates status automatically as user confirms validation

5.2a Data Validation

Tasks	Module Objective	Functionality
Edit Extracted Fields	Allow users to manually correct data extracted by IDP for accuracy.	Displays fields in an editable format, along with confidence scores. Saves changes before final validation.
View Confidence Scores	Provide users with insight into IDP's extraction accuracy for validation purposes.	Shows **color-coded confidence ratings** for each field
Search & Filter Fields	Quickly locate specific data points within extracted records.	Supports **search and** displays relevant entries dynamically.
Lock Validated Fields	Ensure data integrity by preventing further changes after validation.	Locks fields once final validation is complete, making them **read-only**.
Finalize Validation & Update Status	Confirm all changes and mark applications as validated for further processing.	Clicking "Validated" updates status from *New* to *Validated*.

5.2b Checklist

Tasks	Module Objective	Functionality
Generate Checklist	Ensure that all required fields and documents for an application are completed.	Creates a read-only checklist for validated applications, listing mandatory fields and required documents.
Enable Checklist for Validated Applications	Prevent incomplete applications from proceeding to the next stage.	Checklist remains **disabled** until the application status is set to "Validated."
Review Checklist Items	Allow users to confirm data completeness before submission.	Displays all required items categorized as *Fulfilled, not fulfilled, not applicable*

Export Checklist as PDF	Provide an official document for offline verification and record-keeping.	Supports PDF export with standardized filename

5.2c Rejection Report

Tasks	Module Objective	Functionality
Generate Rejection report	Ensure that all required fields and documents for an application are completed.	Creates an editable rejection report for validated applications, listing mandatory fields based on smart code and provision to edit officer's and approver's names
Enable rejection report for Validated Applications	Prevent incomplete applications from proceeding to the next stage.	Rejection report remains **disabled** until the application status is set to "Validated."
Review Rejection report Items	Allow users to confirm data completeness before submission.	Displays all required items based on the extracted smart code
Export rejection report as PDF	Provide an official document for offline verification and record-keeping.	Supports PDF export with standardized filename

5.3 Library

Tasks	Module Objective	Functionality
Entity Management	Provide a centralized view of all land-related entities	Categorized display, and quick search/filter options
Export as PDF	Provide a two-column document for offline verification and record-keeping.	Supports PDF export with standardized filename

5.4 Users

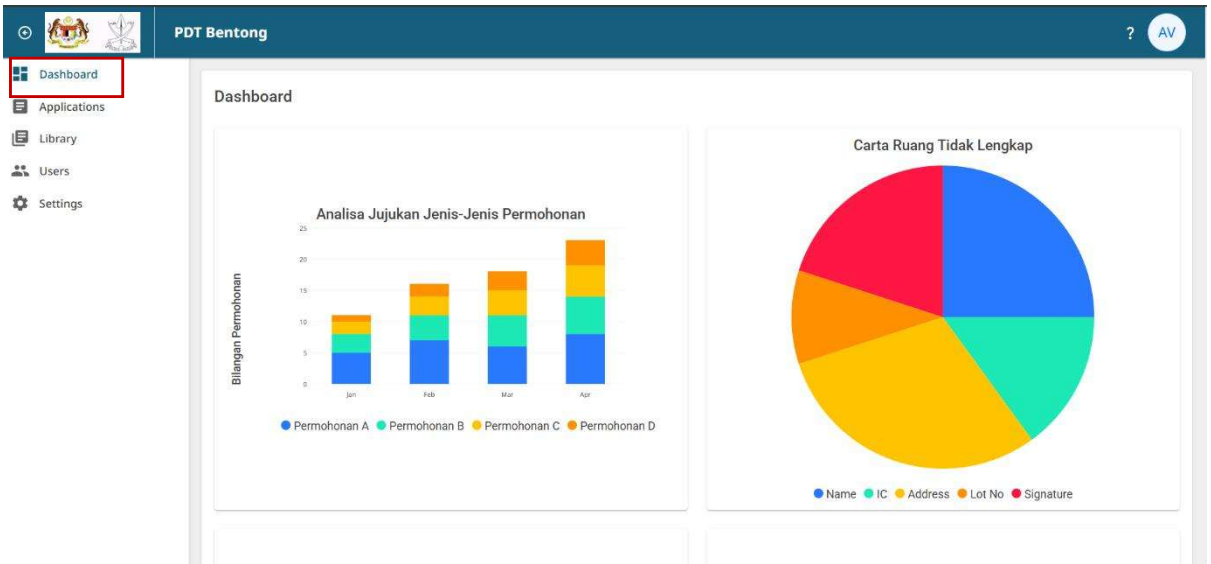
Tasks	Module Objective	Functionality
Basic User Management	Ensure each user is stored systematically and retrieved when needed	Simple database indexing and structured record storage showing the user id, first name, last name, and

		email of all users who can access the application. Add a new user with their first name, last name, email, phone number and password

5.5 Settings

Tasks	Module Objective	Functionality
Profile Display	Allow users to view their stored personal details	Shows first name, last name, email and phone number in a read-only format

6. PDT Bentong Landing Page



7. Navigation and workflow

7.1 User Authentication

7.1.1 Logging In

- Open the application URL in a web browser.
- Enter your **registered email address**.
    - If valid, the password field is displayed.
    - If invalid, the error message **"This email is not registered"** will appear.
- Enter your **password** and click **Sign in**.
- If valid, it navigates into the application's dashboard screen
- If invalid, it displays a relevant error message "*Invalid password. Please provide the correct password*".

7.1.2 Logging Out

- From the sidebar, select **Logout**.
- A prompt will appear:

"Are you sure you want to log out?"

- Click **Yes** to log out, or **Cancel** to remain logged in.

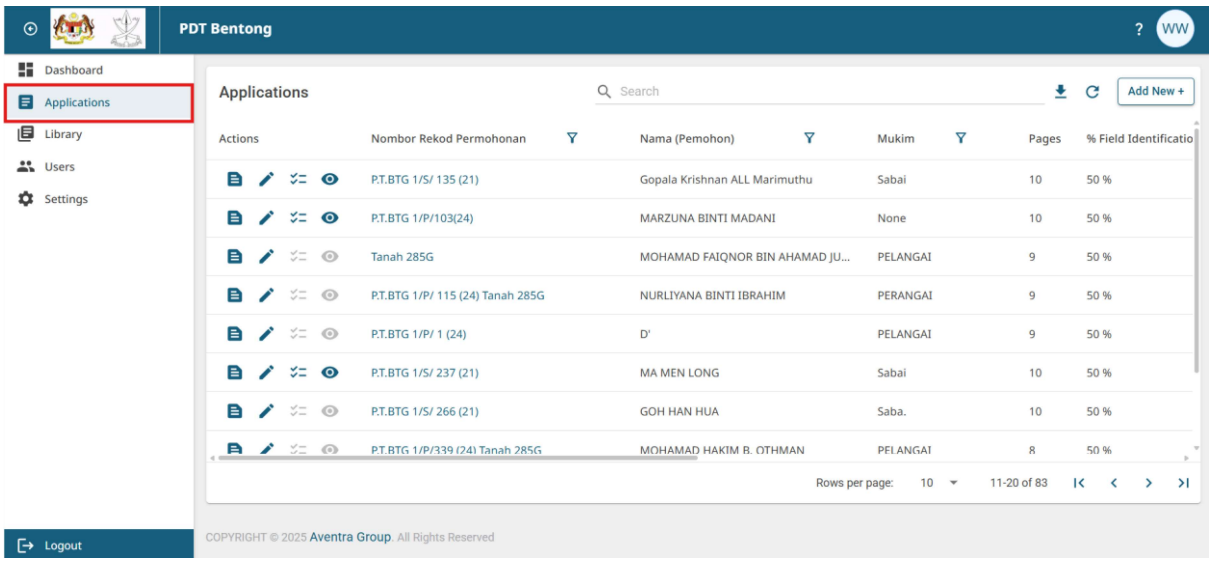
7.2. Dashboard

- Provides insight into land use distribution, allowing users to explore different categories and see the number of applications within each.
- Hovering over a category reveals specific counts for better clarity

7.3 Applications

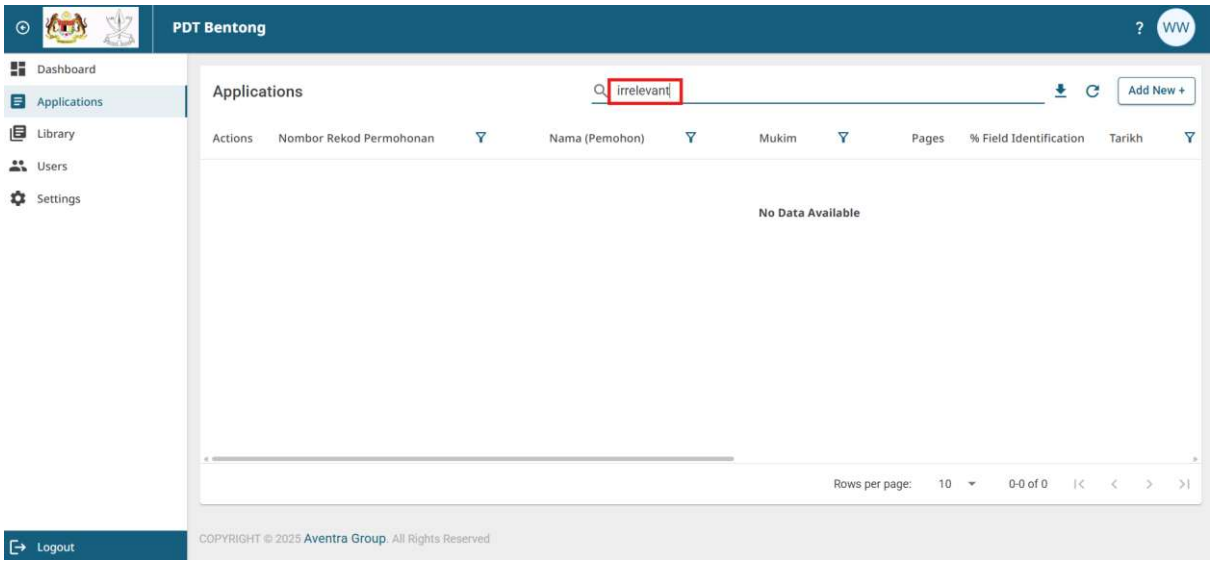
7.3.1 Viewing the Application List

- Navigate to **Applications** in the main menu.
- A table displays the following:



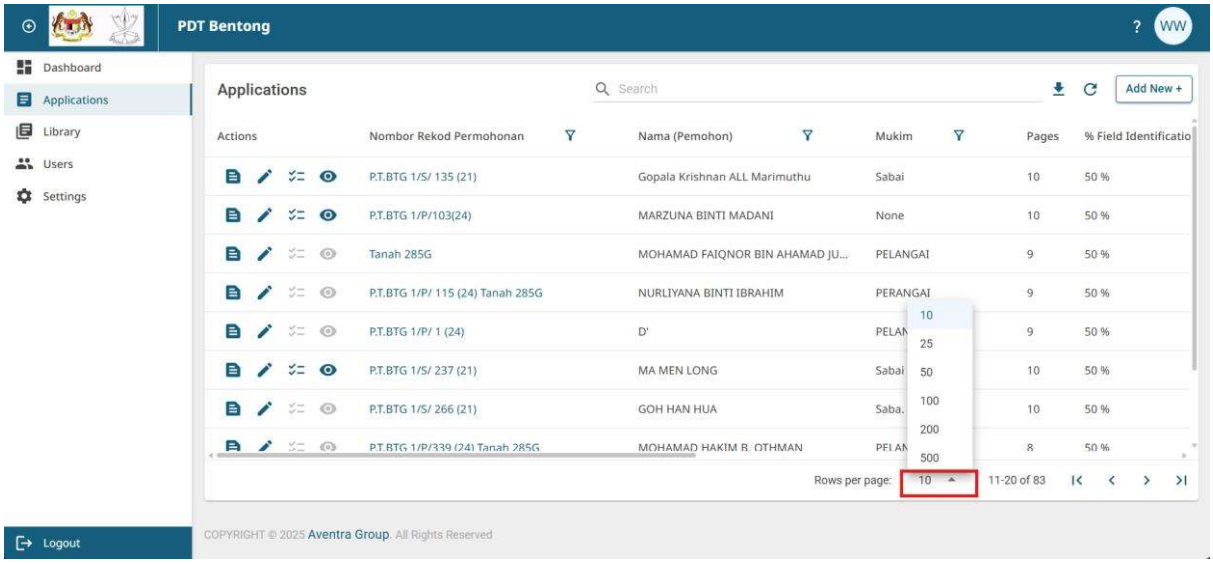
7.3.2 Search and Filter

- Use the **search bar** to search by keywords.
- Apply filters for: Nombor Rekod Permohonan, Nama (Pemohon), Tarikh, and Status.
- Click **Reset** to clear all filters and return to default view.
- Displays **"No data available"** if no match is found.



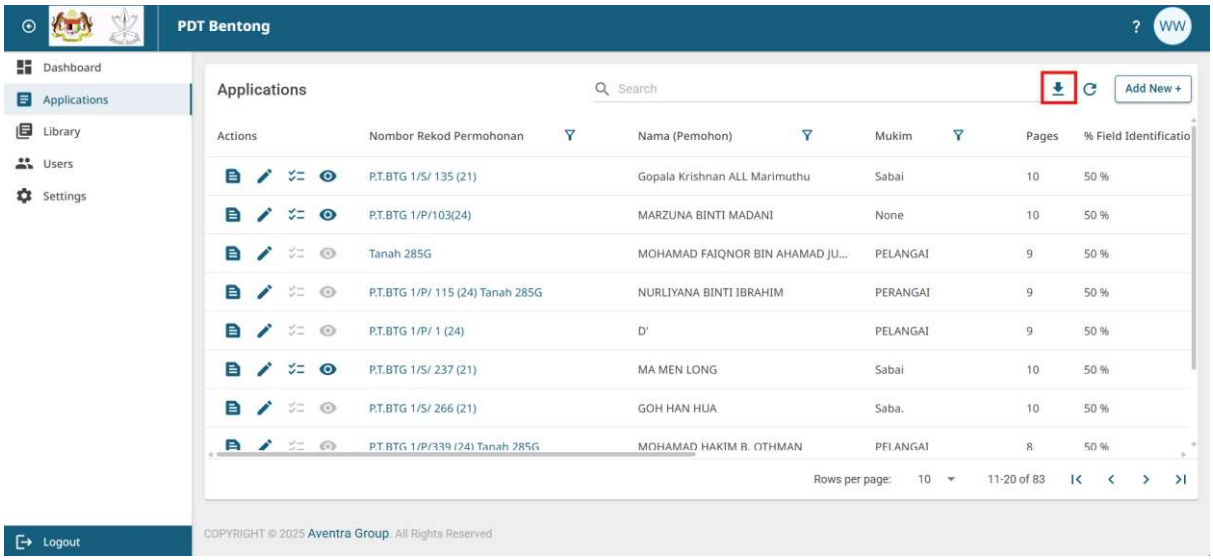
7.3.3 Pagination

- 10 records per page with navigation controls at the bottom.
- Can customise the number of records



7.3.4 Export Application List

- Click the **Export** button to download visible records.
- Format: .csv
- Filename: Land_Applications_Export_<YYYYMMDD>.csv

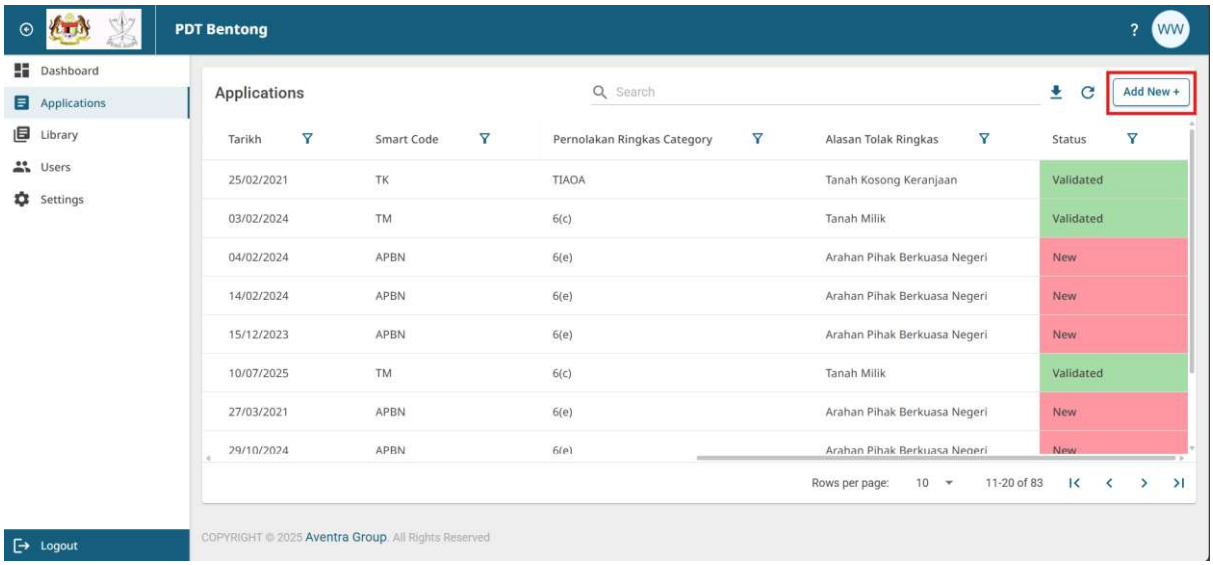


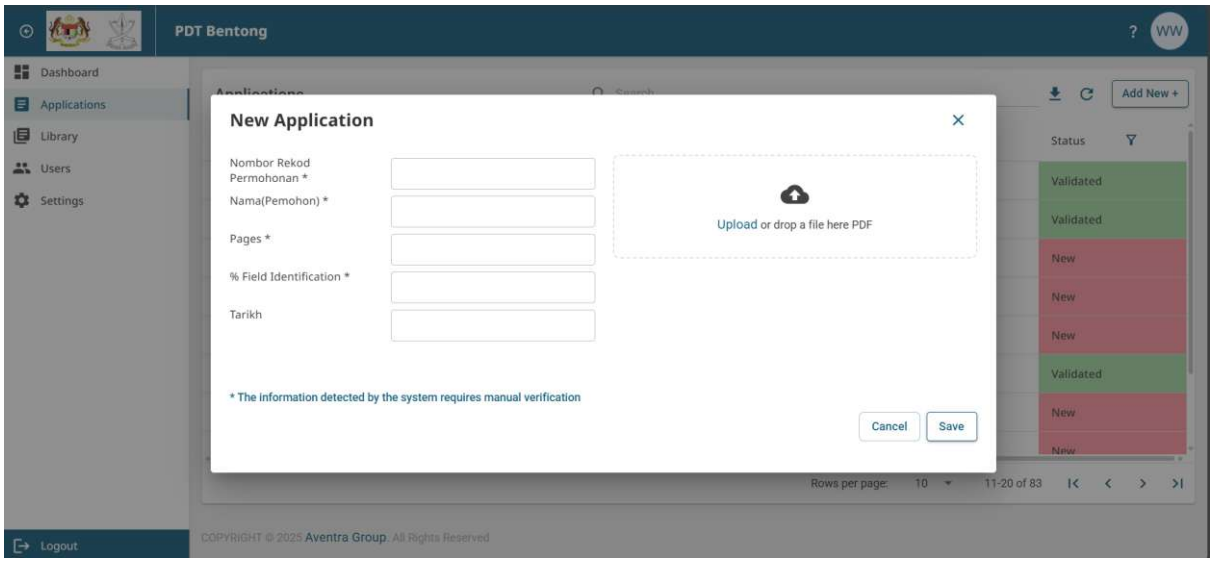
7.3.5. Uploading New Applications

a. Upload Options

From the **Applications** screen:

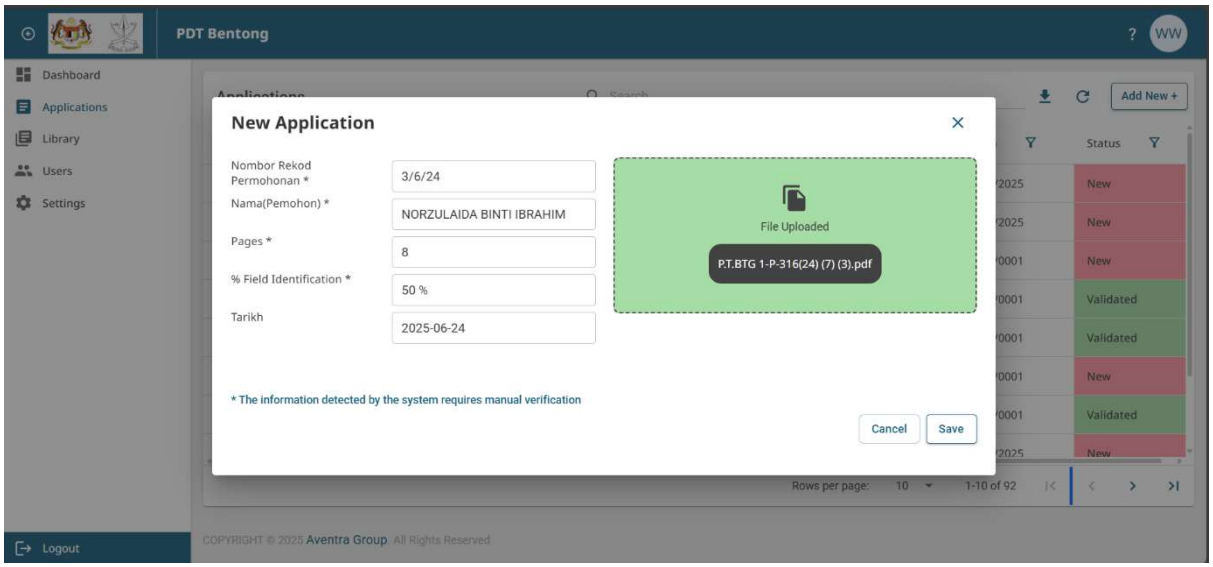
- Click the **"Add New +"** button to upload a new application.
- Upload from:
  - Local file (PDF)





b. IDP Data Extraction

- PDF Document is submitted to the IDP system.
- System throws an error if the file format is different.
- Using IDP, extracted fields are displayed:

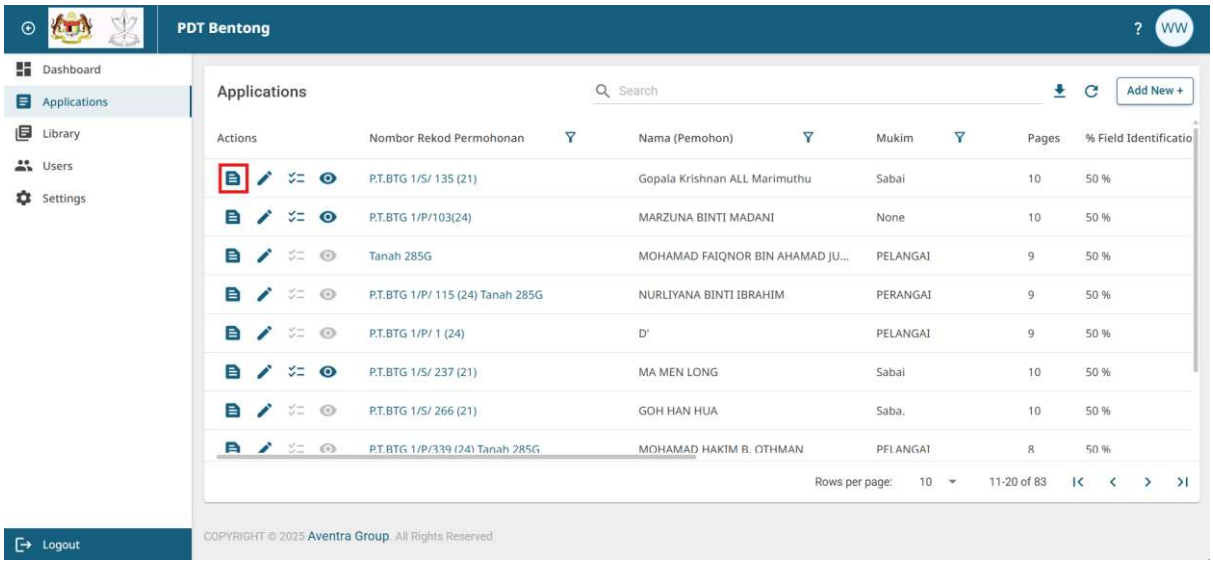


c. Save or Cancel

- **Save** confirms the upload and stores it with a status of **"New"**.
- **Cancel** returns to the Application List.

7.3.6. Viewing and downloading Scanned Documents

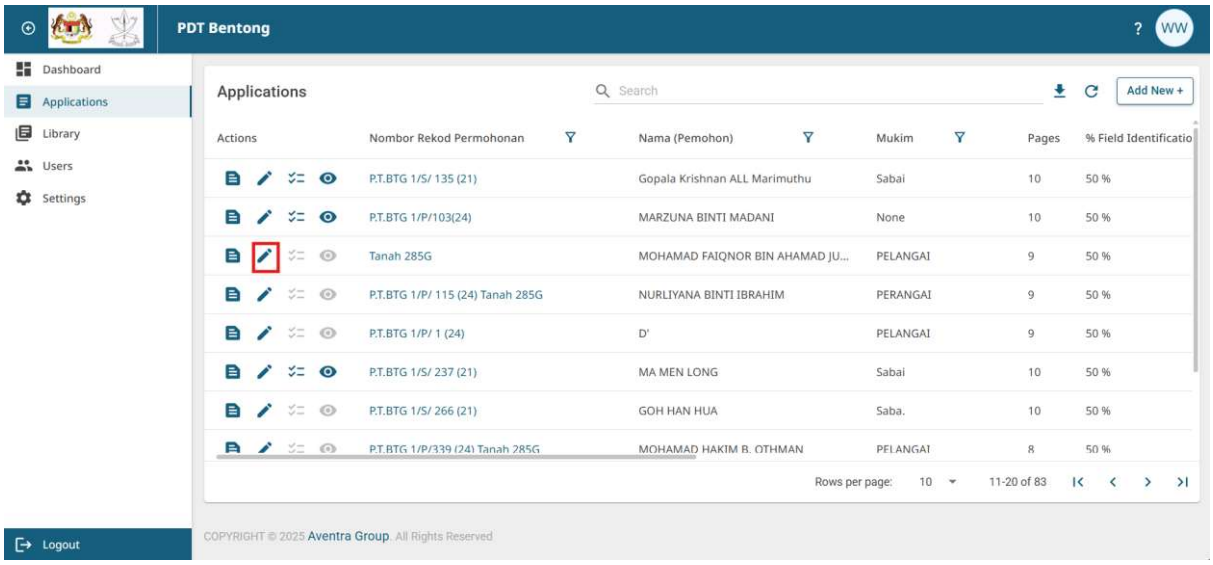
- Click the **file icon** beside any application row.
- The scanned document inside the application gets opened in a new tab



7.3.7. Editing Extracted Fields

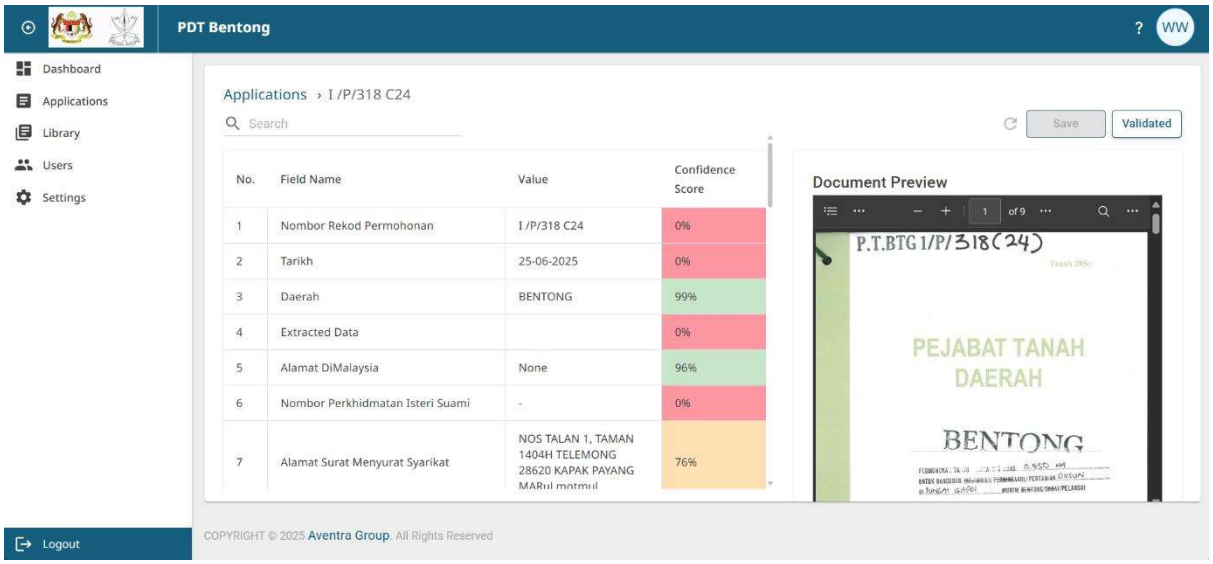
a. Open the Validation Screen

- Click the **edit icon** in any application with **"New"** status.



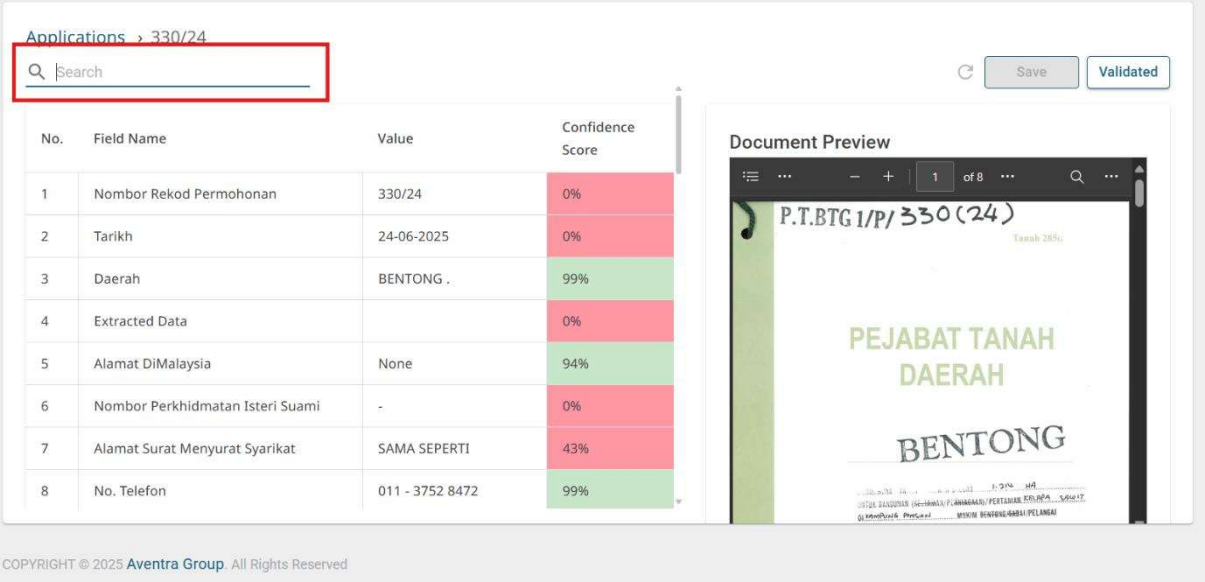
b. Editable Fields

- Field names are fixed.
- Extracted values are **editable**.
- **Color-coded confidence scores** are shown
  - **Green**: 85% – 100%
  - **Orange**: 65% – 84.9%
  - **Yellow**: 50% – 64.9%
  - **Red**: Below 50%



c. Field Search

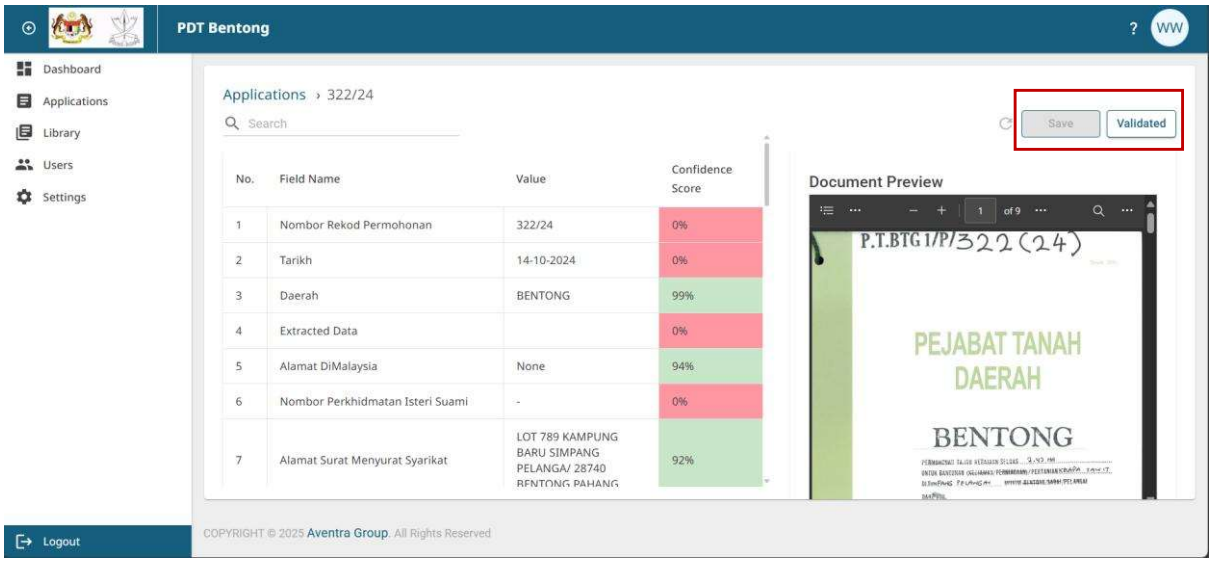
- Search by **keywords**



- Message if no match: **“No data available”**

d. Saving & Validation

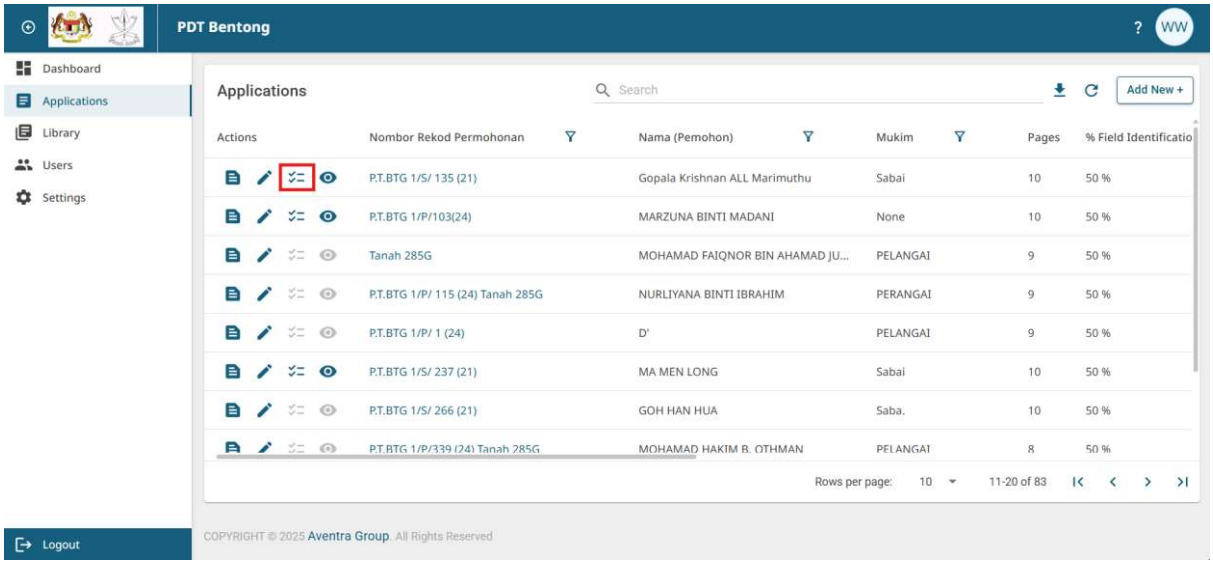
- **Save**: Button gets enabled only after edits.
- **Validated**: Will mark status as **“Validated”** and locks fields.
- Status updates in real-time on the Application List.



7.3.8 Application Checklist

a. Accessing the Checklist

- Available only for **"Validated"** applications.
- Click the **checklist icon** in the Application List.
- Disabled for non-validated applications.



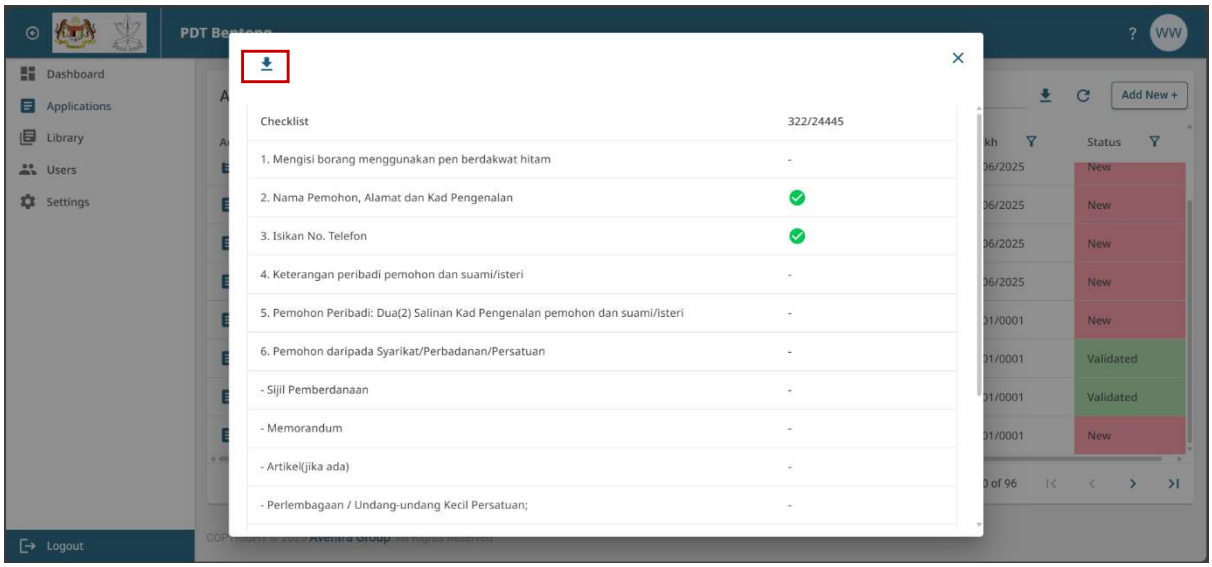
Tooltip:

- If disabled: *"Checklist available once application is validated"*
- If enabled: *"Open checklist for this application"*

b. Checklist Interface

- Opens as an overlay.
- Displays:

- Required fields
- Status: Fulfilled | Not Fulfilled | - Not Applicable
- Checklist is **read-only**.

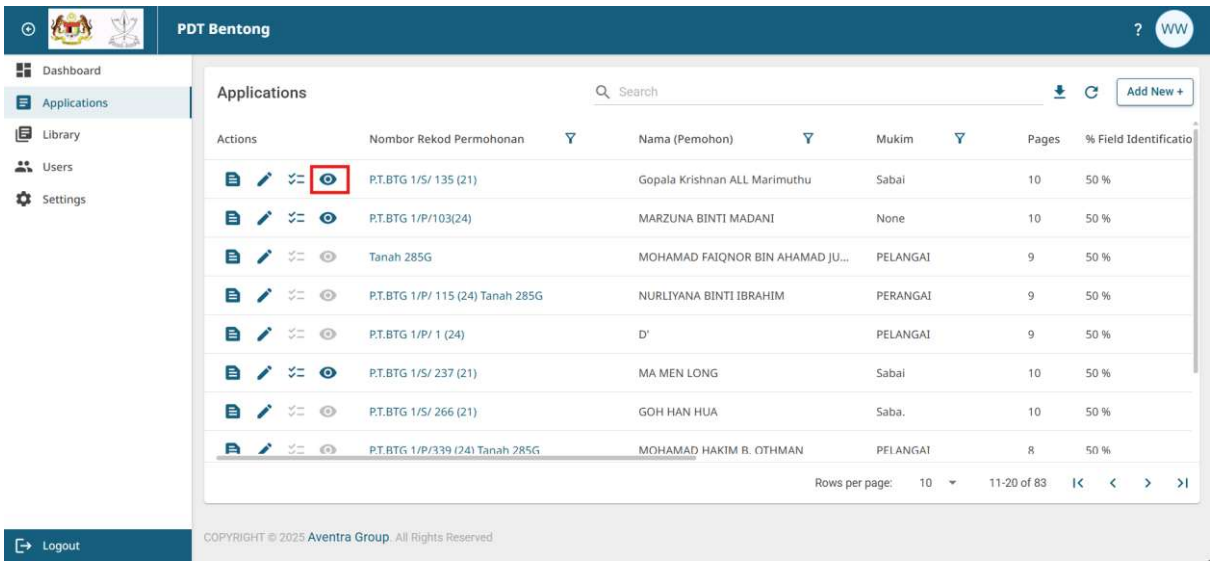


- Can download the checklist in pdf format, Nombor_Rekod_Permohonan_Checklist.pdf

7.3.9 Rejection Report

a. Accessing the Rejection Report

- Available only for **"Validated"** applications.
- Click the **eye icon** in the Application List.
- Disabled for non-validated applications.



Tooltip:

- If disabled: *“Rejection Report available once application is validated”*
- If enabled: *“Open rejection report for this application”*

b. Rejection Report Interface

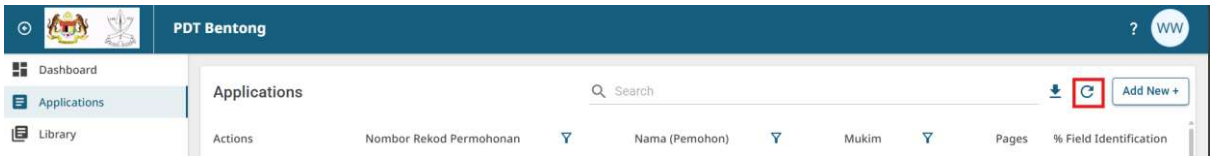
- Opens as an overlay.
- Displays:
    - Required fields
    - Ability to input officer’s and approver’s names
    - Save and complete the rejection report

- Can download the rejection report in pdf format, Nombor_Rekod_Permohonan_rejection_report.pdf

7.4.0 Reset Functionality

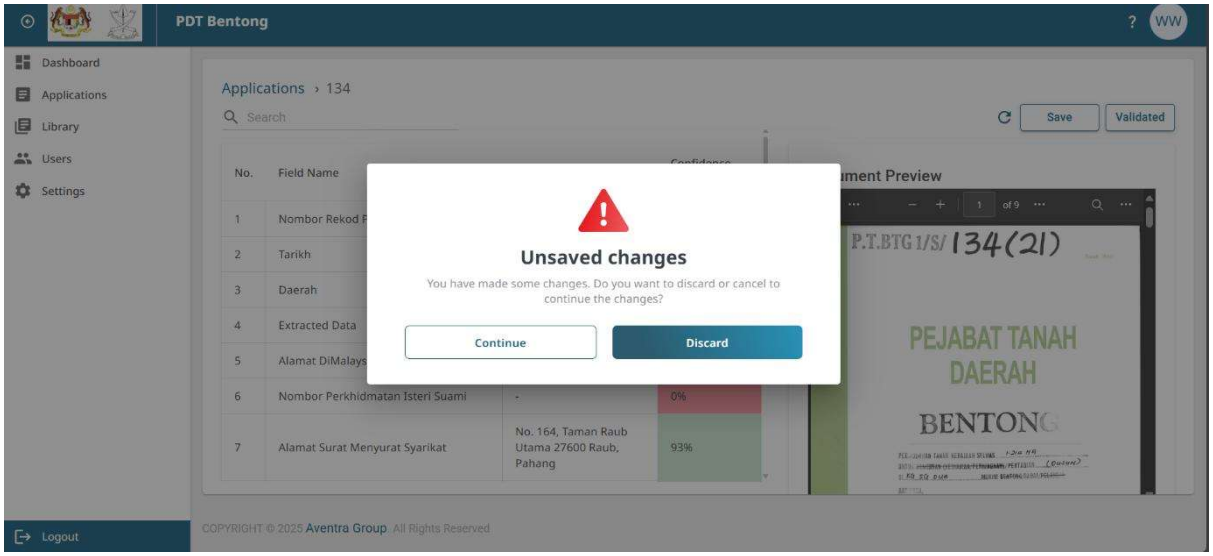
a. In Application List

- Click **Reset** to:
    - Clear filters
    - Reset search input
    - Return to page 1



b. In Application edit screen

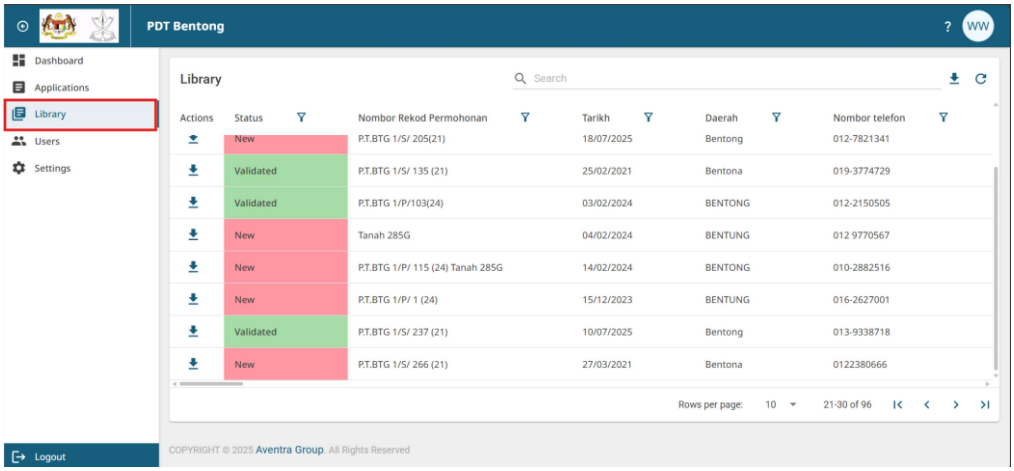
- Click **Reset** to:
  - Clear the changes made
  - Ask for confirmation to discard changes without saving
  - Same prompt appears when switched between other screens before saving



7.4. Library

a. Viewing Applications

- Navigate to **Library** from the menu.
- All applications listed with entities shown as headers.

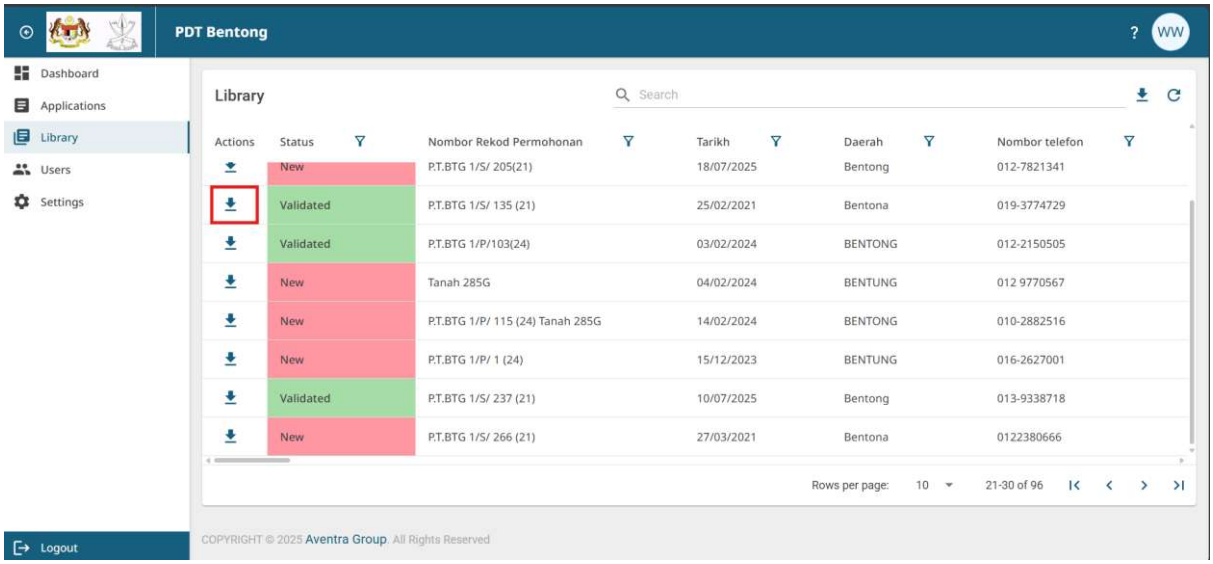


b. Search & Export

- Keyword search is supported.
- Action column allows exporting an individual application's data as PDF.

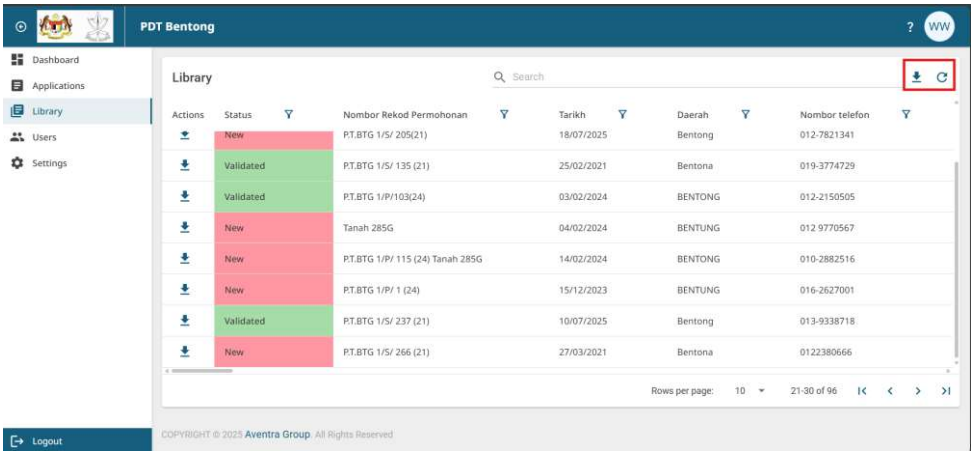
PDF Format:

- Two columns: Field | Value
- Filename: <ApplicationNumber>_entities.pdf



c. Full Export & Reset

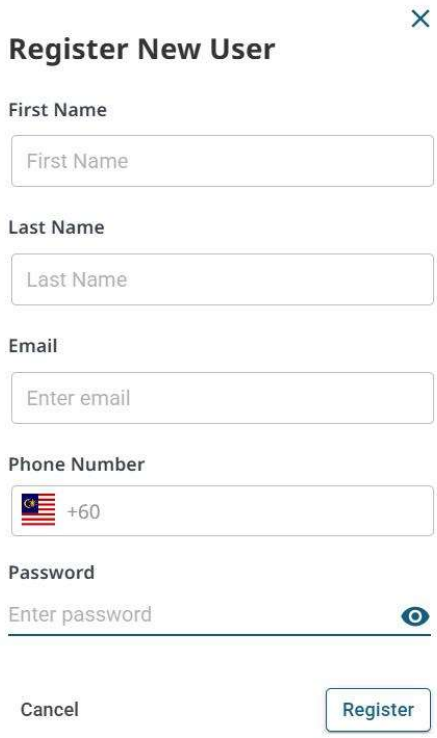
- Click **Reset** to:
  - Clear filters
  - Reset search input
  - Return to page 1
- Click the **Export** button to download visible records comprising all entities
  - Format: .csv
  - Filename: Land_Applications_Library_Export_<YYYYMMDD>.csv



7.5. Users

- Access from the navigation menu.
- Table displays:

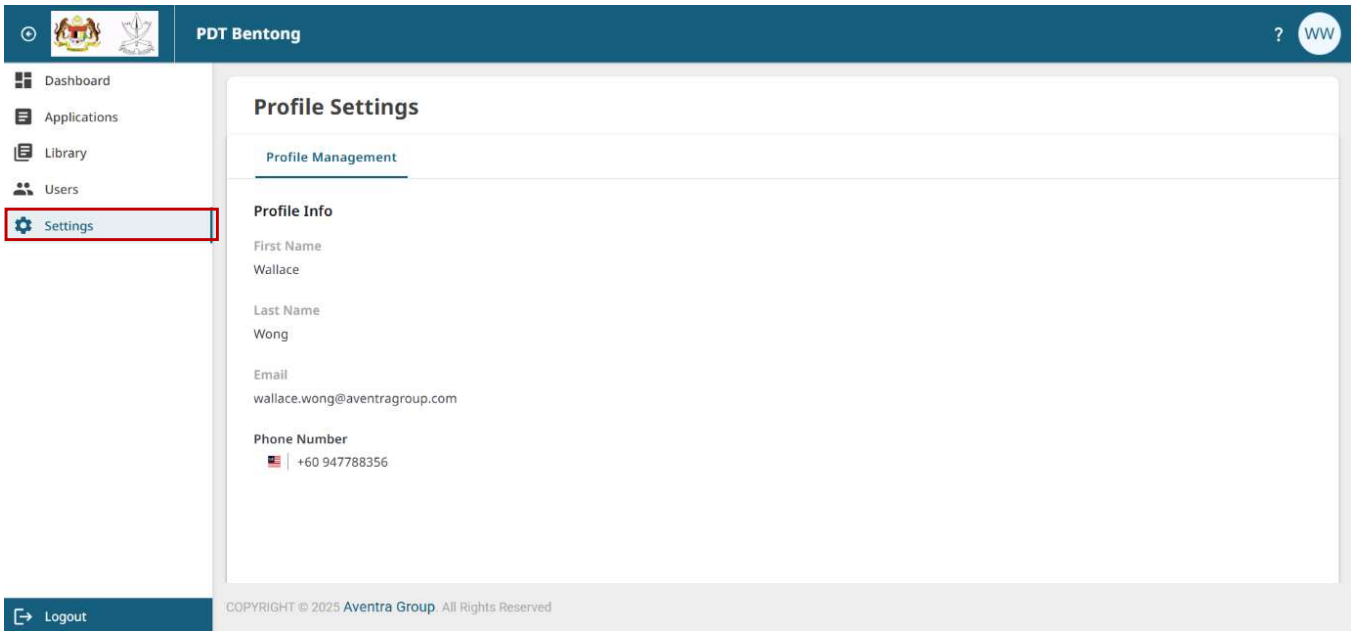
  - Email Address
  - Phone Number
  - First Name
  - Last Name
  - Register a new user with their first name, last name, email and phone number which triggers an alert to send a password to that email in the backend



- Supports:
    - Pagination
    - Search by keywords
    - Message if no match: **“No data available”**

7.6 Settings

- Access via **Settings > Profile Settings > Profile Management**.
- Read-only view with:
    - First Name
    - Last Name
    - Email
    - Phone



7.7 Help Manual Access

- Question mark icon appears near the initial avatar once logged in.
- Clicking opens the **Help Manual** in a new tab (PDF format).

7.8 User Avatar

- Circular icon shows one’s initials:
    - Wallace Wong → **WW**
- Always in **uppercase**

- Clicking it opens **Settings > Profile Management**
